1. The following is an examiner's statement of reasons for allowance: The cited prior art to Inoue et al. teaches the prior art air passage device with a pair of rollers and a film screen with an opening allowing for the passage of air with the film screen being a woven fabric and resin lamination. However, Inoue discloses placing the woven film (the film with the higher elongation rate) on the outside of the curved path with the resin (the film with the lower elongation rate) on the inside of the curved path in contact with the rollers. (See col. 4, lines 52-56 which teaches the low friction material to be in contact with the rollers. Col. 5, lines 5-9 teaches the low friction material to be the resin layer.) Page 3 of the specification discloses the woven material with the higher temperature elongation to be in contact with the rollers and the resin material to be on the opposite side. This structure is also called for in claim 1, lines 9-13. Inoue clearly teaches that the reason for placing the resin in contact with the rollers, i.e. on the inside of the curved path, is because the resin has a lower friction component and therefore requires less force to wind around the rollers. There is no cited teaching in the prior art for reversing the film screen in the Inoue reference by placing the woven film against the rollers on the inside of the curved path with the resin material on the outside of the path as called for in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
